

Artisan Focus Fund

MONTHLY Summary

Investor Class: ARTTX | Advisor Class: APDPTX

As of 30 April 2024

Investment Process Highlights

The team's investment approach is based on idea generation, a systematic framework for analyzing companies and proactive risk management. Utilizing this approach, the team seeks to construct a focused portfolio designed to maximize alpha while limiting downside risk over the long term.

Idea Generation

- Identify inflections in multi-year trends caused by changes in supply/demand dynamics, societal behavior, market conditions, technology, laws/regulations and business models, among other variables—these can lead to powerful re-ratings of industries and companies
- Find areas where the team's views on industry fundamentals differ from consensus estimates—a key element in alpha generation

Systematic Analytical Framework

- Apply a systematic framework for analyzing companies across sectors and themes, creating a repeatable and methodical decision-making process
- Focus on multi-year earnings power differentiation, expected outcome scenario analysis, return on invested capital and discounted cash flow valuations using the team's proprietary company models
- Utilize internally developed visual outputs to consistently evaluate positions across the portfolio

Proactive Risk Management

- Incorporate risk management into all stages of the investment process
- Evaluate metrics including crowding, correlation, volatility, stress tests, liquidity, factor analysis and macro drivers, in order to inform portfolio construction and position sizing
- Where appropriate, use various instruments, such as options, in an effort to magnify alpha and minimize downside

Source: Artisan Partners/S&P. Returns for periods less than one year are not annualized. Class inception: Investor (24 April 2017); Advisor (31 July 2018). For the period prior to inception, Advisor Class performance is the Investor Class's return for that period ("Linked Performance"). Linked Performance has not been restated to reflect expenses of the Advisor Class and the share class's returns during that period would be different if such expenses were reflected.

Past performance does not guarantee and is not a reliable indicator of future results. Investment returns and principal values will fluctuate so that an investor's shares, when redeemed, may be worth more or less than their original cost. Current performance may be lower or higher than that shown. Call 800.344.1770 for current to most recent month-end performance. Performance may reflect agreements to limit a Fund's expenses, which would reduce performance if not in effect. The Fund's investments in initial public offerings (IPOs) made a material contribution to performance. IPO investments may contribute significantly to a small portfolio's return, an effect that will generally decrease as assets grow. IPO investments may be unavailable in the future.

*% of net assets represents the portfolio's exposures based on the economic value of investments and options are delta-adjusted. Categories "Other" and "Not Applicable" may include ETFs, ETF/Index options and other securities which have not explicitly been classified.

Market Cap Distribution* (% of net assets)

Carefully consider the Fund's investment objective, risks and charges and expenses. This and other important information is contained in the Fund's prospectus and summary prospectus, which can be obtained by calling 800.344.1770. Read carefully before investing.

Current and future portfolio holdings are subject to risk. The value of portfolio securities selected by the investment team may rise or fall in response to company, market, economic, political, regulatory or other news, at times greater than the market or benchmark index. A portfolio's environmental, social and governance ("ESG") considerations may limit the investment opportunities available and, as a result, the portfolio may forgo certain investment opportunities and underperform portfolios that do not consider ESG factors. Non-diversified portfolios may invest larger portions of assets in securities of a smaller number of issuers and performance of a single issuer may have a greater impact to the portfolio's returns. Use of derivatives may create investment leverage and increase the likelihood of volatility and risk of loss in excess of the amount invested. High portfolio turnover may adversely affect returns due to increased transaction costs and creation of additional tax consequences. Securities of small- and medium-sized companies tend to have a shorter history of operations, be more volatile and less liquid and may have underperformed securities of large companies during some periods. International investments involve special risks, including currency fluctuation, lower liquidity, different accounting methods and economic and political systems, and higher transaction costs. These risks typically are greater in emerging and less developed markets, including frontier markets.

S&P 500[®] Index measures the performance of 500 US companies focused on the large-cap sector of the market. The index(es) are unmanaged; include net reinvested dividends; do not reflect fees or expenses; and are not available for direct investment.

Unless otherwise indicated, all information in this report includes all classes of shares, except performance and expense ratio information, and is as of the date shown in the upper right hand corner. Totals may not sum due to rounding.

Percent of net assets represents the portfolio's exposures based on the economic value of investments (including delta-adjusting options exposures). Delta-adjusted options exposure is a measure of the market exposure created by the options and accounts for the sensitivity of options to changes in price of the underlying security. In comparison, measuring the exposure of an option at the market value of the option or notional value can understate or overstate, respectively, the economic exposure and risk. This estimate of portfolio exposure is only an approximation of the portfolio at a point in time.

This material is provided for informational purposes without regard to your particular investment needs and shall not be construed as investment or tax advice on which you may rely for your investment decisions. Investors should consult their financial and tax adviser before making investments in order to determine the appropriateness of any investment product discussed herein. **Weighted Average** is the average of values weighted to the data set's composition. **Weighted Harmonic Average** is a calculation of weighted average commonly used for rates or ratios. **Market Cap** is the aggregate value of all of a company's outstanding equity securities. **Return on Equity (ROE)** is a profitability ratio that measures the amount of net income returned as a percentage of shareholders' equity. **LT EPS Growth Rate** is the average of the 3-5 year forecasted EPS growth rate of a company. **Active Share** is the percentage of a portfolio that differs from its benchmark. Active Share can range from 0% for an index fund to 100% for a portfolio with no overlap with an index. **Price-to-Earnings Ratio (P/E Ratio)** measures how expensive a stock is. Earnings figures used for FY1 and FY2 are estimates for the current and next unreported fiscal years. **Return on Invested Capital (ROIC)** is a measure of how well a company generates cash flow relative to capital invested in the business.
