

Artisan High Income Strategy

QUARTERLY Fact Sheet

As of 31 March 2024

For Institutional Investors – Not for Onward Distribution

Investment Process Highlights

The investment team seeks to invest in issuers with high-quality business models that have compelling risk-adjusted return characteristics. The team will invest primarily in non-investment grade corporate bonds and secured and unsecured loans of US and non-US issuers.

Business Quality

- Qualitative industry analysis
- Examine management decision-making history
- Consider ESG-related risk factors

Financial Strength & Flexibility

- Free cash flow analysis
- Corporate structure review
- Capital structure review

Competitive Edge

- Conservative financial projections
- Competitive dynamics
- Capital structure position
- Enterprise value support

Value Identification

- Credit improvement opportunities
- Relative value within the capital structure
- Credit cycle awareness
- Catalysts with optionality
- Dislocation exploitation

Portfolio Composition (% of total portfolio)

Corporate Bonds	74.4
Bank Loans	16.8
Equities	0.2
Cash and Cash Equivalents	8.6
TOTAL	100.0%

Source: Artisan Partners/Bloomberg. Negative cash weightings and portfolio composition greater than 100% may be due to unsettled transactions or investment in derivative instruments. Treasury futures represented net notional exposure of 0.00% of net assets.

Source: Artisan Partners/ICE BofA. Returns for periods less than one year are not annualized.

Past performance does not guarantee and is not a reliable indicator of future results. Current performance may be lower or higher than the performance shown. Unlike the Index, the High Income Composite may hold loans and other security types. At times, this causes material differences in relative performance. Composite performance has been presented in both gross and net of investment management fees.

Investment Risks: Investments will rise and fall with market fluctuations and investor capital is at risk. Investors investing in strategies denominated in non-local currency should be aware of the risk of currency exchange fluctuations that may cause a loss of principal. These risks, among others, are further described on the next page, which should be read in conjunction with this material.

Portfolio Construction

The team generally determines the amount of assets invested in each issuer based on conviction, valuation and availability of supply. Based on the team's analysis it divides the portfolio into three parts. Core investments are generally positions with stable to improving credit profiles and lower loan to value ratios. Spread investments are those where the team has an out-of-consensus view about a company's credit improvement potential. Opportunistic investments are driven by market dislocations that have created a unique investment opportunity. Allocations to each group will vary over time based on market conditions.

Investment Risks: Fixed income securities carry interest rate risk and credit risk for both the issuer and counterparty and investors may lose principal value. In general, when interest rates rise, fixed income values fall. High income securities (junk bonds) are speculative, experience greater price volatility and have a higher degree of credit and liquidity risk than bonds with a higher credit rating. The portfolio typically invests a significant portion of its assets in lower-rated high income securities (e.g., CCC). Loans carry risks including insolvency of the borrower, lending bank or other intermediary. Loans may be secured, unsecured, or not fully collateralized, trade infrequently, experience delayed settlement, and be subject to resale restrictions. Private placement and restricted securities may not be easily sold due to resale restrictions and are more difficult to value. Use of derivatives may create investment leverage and increase the likelihood of volatility and risk of loss in excess of the amount invested. International investments involve special risks, including currency fluctuation, lower liquidity, different accounting methods and economic and political systems, and higher transaction costs. These risks typically are greater in emerging and less developed markets, including frontier markets. These risks, among others, are further described in Artisan Partners Form ADV, which is available upon request.

The Artisan Strategy characteristics relate to that of a representative account managed within an investment composite. It is intended to provide a general illustration of the investment strategy and considerations used by Artisan Partners in managing that strategy, unless otherwise indicated. Individual accounts may differ, at times significantly, from the reference data shown due to varying account restrictions, fees and expenses, and since-inception time periods, among others. Where applicable, this information is supplemental to, and not to be construed with, a current or prospective client's investment account information.

Securities of the same issuer are aggregated to determine a holding's weight in the portfolio. Portfolio statistics calculations exclude outlier data and certain securities which lack applicable attributes, such as private securities. Artisan Partners may substitute information from a related security if unavailable for a particular security. This material is as of the date indicated and is subject to change without notice. Portfolio statistics include accrued interest unless otherwise stated. Totals may not sum due to rounding.

Net-of-fees composite returns were calculated using the highest model investment advisory fees applicable to portfolios within the composite. Fees may be higher for certain pooled vehicles and the composite may include accounts with performance-based fees. All performance results are net of commissions and transaction costs, and have been presented gross and net of investment advisory fees. Dividend income is recorded net of foreign withholding taxes on ex-dividend date or as soon after the ex-dividend date as the information becomes available to Artisan Partners. Interest income is recorded on the accrual basis. Performance results for the Index include reinvested dividends and are presented net of foreign withholding taxes but, unlike the portfolio's returns, do not reflect the payment of sales commissions or other expenses incurred in the purchase or sale of the securities included in the indices.

ICE BofA US High Yield Index measures the performance of below investment grade \$US-denominated corporate bonds publicly issued in the US market. The index(es) are unmanaged; include net reinvested dividends; do not reflect fees or expenses; and are not available for direct investment.

Credit Quality ratings are from S&P and/or Moody's. Ratings typically range from AAA (highest) to D (lowest) and are subject to change. The ratings apply to underlying holdings of the portfolio and not the portfolio itself. If securities are rated by both agencies, the higher rating was used. Securities not rated by S&P or Moody's are categorized as Unrated/Not Rated. **Free Cash Flow** is a measure of financial performance calculated as operating cash flow minus capital expenditures. **Coupon** is the annual interest rate paid by a fixed income security, expressed as a percentage of the face value. **Current Yield** is the annual income (interest or dividends) divided by the current price of a security. **Duration** estimates the sensitivity of underlying fixed income securities to changes in interest rates—the longer the duration, the greater the sensitivity to changes in interest rates. **Average Price** is the aggregate market value of the fixed income securities in the portfolio. **Yield to maturity (YTM)** is the total return anticipated on fixed income securities if the securities are held until maturity.
