

Artisan International Explorer Fund

QUARTERLY
Fact Sheet

Advisor Class: ARDBX

As of 31 March 2024

Investment Process Highlights

The investment team seeks to invest in high-quality, undervalued businesses that offer the potential for superior risk/reward outcomes. The investment universe is generally non-US equities with market caps below \$5 billion.

Undervaluation

- Determine the intrinsic value of the business
- Invest at a significant discount to intrinsic value

Business Quality

- Strong free cash flow
- High/improving returns on capital
- Strong competitive positions

Financial Strength

- Strong balance sheets reduce potential for capital risk
- Provides management ability to build value

Shareholder-Oriented Management

- History of building shareholder value

Past performance does not guarantee and is not a reliable indicator of future results. Investment returns and principal values will fluctuate so that an investor's shares, when redeemed, may be worth more or less than their original cost. Performance may reflect agreements to limit a Fund's expenses, which would reduce performance if not in effect. Current performance may be lower or higher than that shown. Call 800.344.1770 for current to most recent month-end performance.

Carefully consider the Fund's investment objective, risks and charges and expenses. This and other important information is contained in the Fund's prospectus and summary prospectus, which can be obtained by calling 800.344.1770. Read carefully before investing.

The value of portfolio securities selected by the investment team may rise or fall in response to company, market, economic, political, regulatory or other news, at times greater than the market or benchmark index. A portfolio's environmental, social and governance ("ESG") considerations may limit the investment opportunities available and, as a result, the portfolio may forgo certain investment opportunities and underperform portfolios that do not consider ESG factors. International investments involve special risks, including currency fluctuation, lower liquidity, different accounting methods and economic and political systems, and higher transaction costs. These risks typically are greater in emerging and less developed markets, including frontier markets. Such risks include new and rapidly changing political and economic structures, which may cause instability; underdeveloped securities markets; and higher likelihood of high levels of inflation, deflation or currency devaluations. Securities of small- and medium-sized companies tend to have a shorter history of operations, be more volatile and less liquid and may have underperformed securities of large companies during some periods. Value securities may underperform other asset types during a given period.

MSCI AC World Ex USA Small Cap Index measures the performance of small-cap companies in developed and emerging markets excluding the US. The index is unmanaged; includes net reinvested dividends; does not reflect fees or expenses; and is not available for direct investment. Country exposure percentages reflect country designations as classified by MSCI as of the date shown. Securities not classified by MSCI reflect country designations as of the date the report was generated. MSCI makes no express or implied warranties or representations and shall have no liability whatsoever with respect to any MSCI data contained herein. The MSCI data may not be further redistributed or used to create indices or financial products. This report is not approved or produced by MSCI.

Unless otherwise indicated, all information in this report includes all classes of shares, except performance and expense ratio information, and is as of the date shown in the upper right hand corner. Portfolio statistics calculations exclude outlier data and certain securities which lack applicable attributes, such as private securities. Artisan Partners may substitute information from a related security if unavailable for a particular security. Totals may not sum due to rounding.

Portfolio holdings are subject to change without notice and are not intended as recommendations of individual securities.

The Morningstar Medalist Rating™ is the summary expression of Morningstar's forward-looking analysis of investment strategies based on a rating scale of Gold, Silver, Bronze, Neutral, and Negative. Medalist Ratings indicate which investments Morningstar believes are likely to outperform a relevant index or peer group average on a risk-adjusted basis over time. Investment products are evaluated on three key pillars (People, Parent, and Process) which, when coupled with a fee assessment, forms the basis for Morningstar's conviction in those products' investment merits and determines the rating they're assigned. Pillars may be evaluated via an analyst's qualitative assessment or using algorithmic techniques, taking the form of Low, Below Average, Average, Above Average, and High. Products are sorted by their expected performance into rating groups defined by their Morningstar Category and their active or passive status. When analysts directly cover a product, they assign the three pillar ratings based on their qualitative assessment, subject to the oversight of the Analyst Rating Committee, and monitor and reevaluate them at least every 14 months. When the vehicles are covered either indirectly by analysts or by algorithm, the ratings are assigned monthly.

Ratings involve risks and uncertainties and should not be used as the sole basis in evaluating an investment, nor be considered an offer or solicitation to buy or sell the investment. For information about Morningstar ratings and their methodology, go to global.morningstar.com/managerdisclosures/.

Investors should consult their financial and tax adviser before making investments in order to determine the appropriateness of any investment product discussed herein.

Market Cap is the aggregate value of all of a company's outstanding equity securities. **Weighted Harmonic Average** is a calculation of weighted average commonly used for rates or ratios. **Price-to-Earnings Ratio (P/E Ratio)** measures how expensive a stock is. Earnings figures used for FY1 and FY2 are estimates for the current and next unreported fiscal years. **Price-to-Book Ratio (P/B Ratio)** measures a company's stock price in relation to its book value (the total amount a company would be worth if it liquidated its assets and paid back all its liabilities). **Return on Assets (ROA)** is a profitability ratio that measures the amount of net income returned as a percentage of total assets. **Active Share** is the percentage of a portfolio that differs from its benchmark. Active Share can range from 0% for an index fund to 100% for a portfolio with no overlap with an index.

Net Debt/Capital reflects a company's financial leverage as measured by its net debt (total debt minus cash & cash equivalents) divided by total capital. The aggregate calculation excludes companies classified by GICS as banks, consumer finance and capital markets to focus on nonfinancial liabilities. **Return on Capital (ROC)** is a measure of how effectively a company uses the money (borrowed or owned) invested in its operations. **Enterprise Value to Earnings Before Interest, Taxes, Depreciation and Amortization (EV/EBITDA)** is a measure of the intrinsic value of a business. EV is calculated as the market capitalization of the company plus its long-term debt. EBITDA is an approximate measure of a company's operating cash flow based on data from the company's income statement. It is calculated by looking at earnings before the deduction of interest expenses, taxes, depreciation, and amortization.

Artisan Partners Funds offered through Artisan Partners Distributors LLC, member FINRA.
