Commentary

Non-investment grade markets continued their steady ascent in September, with high yield bonds and leveraged loans (as measured by the JP Morgan Leveraged Loan Index) clocking in modest returns of 0.9% and 0.4%. Our portfolio outpaced the BAML Index during the month, aided by decidedly positive credit selection across our book of bonds and loans.

September was marked by a supportive backdrop of subdued equity volatility, firmer energy prices and increased optimism surrounding the GOP's announced plan for tax reform, helping reignite the reflationary trading conditions that propelled risk assets earlier in the year. Despite headwinds from higher Treasury yields, non-investment grade bond yields decreased 17bps, approaching three-year lows of 5.9%. However, leveraged loan yields ticked higher as repricing pressure pushed the yield-to-three-year takeout up 21bps to 6.1%. Both asset classes absorbed the effects of higher Treasury yields with moderately tighter spreads.

Across the ratings spectrum, lower rated bonds led markets higher with CCC bonds returning 1.4%, followed by BB returns of 0.8% and single-B returns of 0.7%. Energy bonds were the clear winner among industries with returns of 3.3%, helped by a six-month high in crude prices. Retail was the biggest laggard, down 0.8%, pressured by the month's only default in toy retail giant Toys R Us.

The Toys R Us bankruptcy filing was a headline-grabber, yet default activity remains near historical lows amid stable economic conditions and healthy corporate fundamentals. With few threats to derail the current non-investment grade rally, September was the third consecutive month with one or no defaults, marking the quietest three-month stretch of default activity since May 2011.

We believe the idiosyncratic and focused nature of our portfolio positions it well in the current environment characterized by rich valuations and the lack of differentiation across credit quality. We remain committed to our strategy of searching for issuers with high-quality business models, and together with capital structure flexibility, believe we can continue to find compelling, risk-adjusted investment opportunities.

Past performance does not guarantee and is not a reliable indicator of future results. Investment returns and principal values will fluctuate so that an investor's shares, when redeemed, may be worth more or less than their original cost. Current performance may be lower or higher than that shown. Call 800.344.1770 for current to most recent month-end performance. The performance information shown does not reflect the deduction of a 2% redemption fee on shares held by an investor for 90 days or less and, if reflected, the fee would reduce the performance quoted. Unlike the Index, the High Income Fund may hold loans and other security types. At times, this causes material differences in relative performance.

Portfolio Construction

The team generally determines the amount of assets invested in each issuer based on conviction, valuation and availability of supply. Based on the team's analysis it divides the portfolio into three parts. Core investments are generally positions with stable to improving credit profiles and lower loan to value ratios. Spread investments are those where the team has an out-of-consensus view about a company's credit improvement potential. Opportunistic investments are driven by market dislocations that have created a unique investment opportunity. Allocations to each group will vary over time based on market conditions.

Bryan C. Krug, CFA	17

Carefully consider the Fund's investment objective, risks and charges and expenses. This and other important information is contained in the Fund's prospectus and summary prospectus, which can be obtained by calling 800.344.1770. Read carefully before investing.

Fixed income securities carry interest rate risk and credit risk for both the issuer and counterparty and investors may lose principal value. In general, when interest rates rise, fixed income values fall. High income securities (junk bonds) are speculative, experience greater price volatility and have a higher degree of credit and liquidity risk than bonds with a higher credit rating. The portfolio typically invests a significant portion of its assets in lower-rated high income securities (e.g., CCC). Loans carry risks including insolvency of the borrower, lending bank or other intermediary. Loans may be secured, unsecured, or not fully collateralized, trade infrequently, experience delayed settlement, and be subject to resale restrictions. Private placement and restricted securities may not be easily sold due to resale restrictions and are more difficult to value. The use of derivatives in a portfolio may create investment leverage and increase the likelihood of volatility and risk of loss in excess of the amount invested. International investments involve special risks, including currency fluctuation, lower liquidity, different accounting methods and economic and political systems, and higher transaction costs. These risks typically are greater in emerging markets.

BofA Merrill Lynch US High Yield Master II (BAML) Index measures the performance of below investment grade \$US-denominated corporate bonds publicly issued in the US market. J.P. Morgan Leveraged Loan Index is designed to mirror the investable universe of the USD-denominated institutional leveraged loan market. The index(es) are unmanaged; include net reinvested dividends; do not reflect fees or expenses; and are not available for direct investment.

For the purpose of determining the Fund's holdings, securities of the same issuer are aggregated to determine the weight in the Fund. The discussion of portfolio holdings does not constitute a recommendation of any individual security. Securities named in the Commentary, but not listed as a Top Ten Holding or not listed here are not held in the Fund as of the date of this report. The portfolio managers' views and portfolio holdings are subject to change and the Fund disclaims any obligation to advise investors of such changes.

All information in this report includes all classes of shares, except performance and expense ratio information and as otherwise indicated, and is as of the date shown in the upper right hand corner unless otherwise indicated. Artisan Partners may exclude outliers when calculating portfolio statistics. If certain information is unavailable for a particular security Artisan Partners may use data from a related security to calculate portfolio characteristics. Portfolio statistics include accrued interest unless otherwise stated and may vary from the official books and records of the Fund. Totals may not sum due to rounding.

30-Day SEC Yield is based on a formula specified by the SEC that calculates a fund's hypothetical annualized income, as a percentage of its assets. This hypothetical yield will differ from the fund's actual experience and as a result, income distributions from the fund may be higher or lower. **Credit Quality** ratings are from S&P and/or Moody's. Ratings typically range from AAA (highest) to D (lowest) and are subject to change. The ratings apply to underlying holdings of the portfolio and not the portfolio itself. If securities are rated by both agencies, the higher rating was used. Securities not rated by S&P or Moody's are categorized as Unrated/Not Rated. **Maturity Distribution** represents the weighted average of the maturity dates of the securities held in the portfolio. **Spread** is the difference in yield between two bonds of similar maturity but different credit quality.
