Commentary

Credit markets generated another month of modest gains, helped by a steady string of positive catalysts that included improved trade rhetoric, better-than-expected earnings and a widely anticipated Fed rate cut. High yield bonds (as measured by the ICE BofAML US High Yield Index) returned 0.2% in October to push YTD gains to 11.8%. The excessive reach for yield has resulted in strong flows into the asset class, offsetting some modest deterioration of fundamentals in sectors serving cyclical end markets. Leveraged loans, on the other hand, continue to face headwinds from evaporating retail demand and slowing CLO creation. This limited support caused leveraged loans (as measured by the JPMorgan Leveraged Loan Index) to decline 0.4% for YTD returns of 6.3%. Loan weakness was the primary reason for our portfolio's relative underperformance during the month and throughout the year.

High yield credit spreads followed the path of intramonth equity volatility by widening 40bps in the first week of the month before tightening into month-end. In all, spreads finished the period 10bps wider at 430bps. Bond yields followed a similar path but ended the month unchanged at 5.9%. Year to date, spreads and yields have declined 107bps and 206bps, respectively.

Across the credit quality spectrum, capital continues to crowd into higher rated segments as investors rotate toward relative safety. BB-rated bonds (0.6%) outperformed CCC-rated bonds (-0.5%) to push the YTD differential to more than 800bps—the most since the commodities downturn of 2016. Waning investor risk appetite was even more apparent in distressed segments, which declined 3.0% in the month. Across sectors, top performers included retail (2.4%), transportation (1.5%) and financial (1.2%). Energy was the only sector to finish lower, declining 2.2% for its fourth straight month of losses.

There was a pickup in default activity, with five companies defaulting on \$7.6 billion in bonds and loans. There was also a noticeable increase in downgrades, with a number of rating actions concentrated in already weak energy and retail issuers. Nonetheless, the 12-month par-weighted high yield default rate of 2.5% remains well below the long-term average of 3.5%. Excluding energy, the high yield default rate is even more benign at 1.1%.

In our opinion, the economic environment is far sturdier than the extreme pessimism being priced into safe-haven assets. We remain constructive on our opportunity set given the expectations for limited defaults, strong technicals and a favorable monetary backdrop in the near term. While valuations for credit markets in aggregate are at the tight end of their historical range, overarching uncertainty has resulted in a pronounced decoupling of risk across industries, credit quality and capital structures, creating vast opportunities for disciplined credit pickers. As investor risk tolerance wanes and bouts of volatility become more frequent, we will use the growing dispersion as an opportunity to strategically invest in credits with attractive risk-reward profiles.

Past performance does not guarantee and is not a reliable indicator of future results. Investment returns and principal values will fluctuate so that an investor's shares, when redeemed, may be worth more or less than their original cost. Current performance may be lower or higher than that shown. Call 800.344.1770 for current to most recent month-end performance. The performance information shown does not reflect the deduction of a 2% redemption fee on shares held by an investor for 90 days or less and, if reflected, the fee would reduce the performance quoted. Unlike the Index, the High Income Fund may hold loans and other security types. At times, this causes material differences in relative performance.

Portfolio Construction

The team generally determines the amount of assets invested in each issuer based on conviction, valuation and availability of supply. Based on the team's analysis it divides the portfolio into three parts. Core investments are generally positions with stable to improving credit profiles and lower loan to value ratios. Spread investments are those where the team has an out-of-consensus view about a company's credit improvement potential. Opportunistic investments are driven by market dislocations that have created a unique investment opportunity. Allocations to each group will vary over time based on market conditions.

Carefully consider the Fund's investment objective, risks and charges and expenses. This and other important information is contained in the Fund's prospectus and summary prospectus, which can be obtained by calling 800.344.1770. Read carefully before investing.

Fixed income securities carry interest rate risk and credit risk for both the issuer and counterparty and investors may lose principal value. In general, when interest rates rise, fixed income values fall. High income securities (junk bonds) are speculative, experience greater price volatility and have a higher degree of credit and liquidity risk than bonds with a higher credit rating. The portfolio typically invests a significant portion of its assets in lower-rated high income securities (e.g., CCC). Loans carry risks including insolvency of the borrower, lending bank or other intermediary. Loans may be secured, unsecured, or not fully collateralized, trade infrequently, experience delayed settlement, and be subject to resale restrictions. Private placement and restricted securities may not be easily sold due to resale restrictions and are more difficult to value. The use of derivatives in a portfolio may create investment leverage and increase the likelihood of volatility and risk of loss in excess of the amount invested. International investments involve special risks, including currency fluctuation, lower liquidity, different accounting methods and economic and political systems, and higher transaction costs. These risks typically are greater in emerging markets.

ICE BofAML US High Yield Master II Index measures the performance of below investment grade \$US-denominated corporate bonds publicly issued in the US market. J.P. Morgan Leveraged Loan Index is designed to mirror the investable universe of the USD-denominated institutional leveraged loan market. The index(es) are unmanaged; include net reinvested dividends; do not reflect fees or expenses; and are not available for direct investment.

For the purpose of determining the Fund's holdings, securities of the same issuer are aggregated to determine the weight in the Fund. The discussion of portfolio holdings does not constitute a recommendation of any individual security. Securities named in the Commentary, but not listed as a Top Ten Holding or not listed here are not held in the Fund as of the date of this report. The portfolio managers' views and portfolio holdings are subject to change and the Fund disclaims any obligation to advise investors of such changes.

All information in this report includes all classes of shares, except performance and expense ratio information and as otherwise indicated, and is as of the date shown in the upper right hand corner unless otherwise indicated. Artisan Partners may exclude outliers when calculating portfolio statistics. If certain information is unavailable for a particular security Artisan Partners may use data from a related security to calculate portfolio characteristics. Portfolio statistics include accrued interest unless otherwise stated and may vary from the official books and records of the Fund. Totals may not sum due to rounding.

30-Day SEC Yield is based on a formula specified by the SEC that calculates a fund's hypothetical annualized income, as a percentage of its assets. This hypothetical yield will differ from the fund's actual experience and as a result, income distributions from the fund may be higher or lower. **Credit Quality** ratings are from S&P and/or Moody's. Ratings typically range from AAA (highest) to D (lowest) and are subject to change. The ratings apply to underlying holdings of the portfolio and not the portfolio itself. If securities are rated by both agencies, the higher rating was used. Securities not rated by S&P or Moody's are categorized as Unrated/Not Rated. **Maturity Distribution** represents the weighted average of the maturity dates of the securities held in the portfolio. **Spread** is the difference in yield between two bonds of similar maturity but different credit quality. **Collateralized Loan Obligation (CLO)** is a security backed by a pool of debt. **Par-weighted Default Rate** represents the total dollar volume of defaulted securities compared to the total face amount of securities outstanding that could have defaulted.
