## Commentary

Higher Treasury yields weighed on high yield bond markets in October, leading to the first monthly loss of the year for the asset class. The ICE BofA US High Yield Index declined 18bps, taking this year's total return to 4.5%. Interest rate pressures were offset by strong flows into the space and better-than-expected fundamentals. Idiosyncratic issues, such as supply chain bottlenecks and firming inflation, continue to make headlines, but issuers are showing operational resilience with strong top and bottom-line momentum. Across the capital structure, leveraged loan returns moderated despite increased interest rate volatility. Strong demand continues to characterize the space, but this was offset somewhat by a strong net issuance and another month of record CLO origination. The JPMorgan Leveraged Loan Index advanced 0.2% to push YTD gains to 4.9%, ahead of high yield bonds.

Our portfolio modestly beat the ICE BofA US High Yield Index during the month with flat returns. Our asset allocation mix was the biggest contributor to the month's gains, with our leveraged loans outpacing the broader high yield benchmark. For the year, the portfolio remains ahead of the index, helped by strong credit selection and our preference for idiosyncratic credit opportunities.

Despite declines for the month, high yield credit spreads remained tight amid strong flows and an improving fundamental backdrop. Yields also ticked higher, increasing 20bps to 4.3%. Credit spreads finished the period at 331bps—just 4bps higher than last month's levels. Across the credit quality spectrum, lower quality ended its streak of relative outperformance. Overall, BBs held up best, declining 0.2%, followed by Bs (-0.2%) and CCCs (-0.4%).

Default activity remained quiet with one borrower defaulting on \$681 million in loans. As a result, the par-weighted high yield default rate further declined to just 0.4% in October. Should defaults remain quiet for the last two months of the year, 2021 will go down as the lightest calendar year of defaults since 2007.

In our view, the value proposition for leveraged credit remains. Leveraged credit is one of the few asset classes left that still offers compelling yield opportunities in a world where they're increasingly scarce. Still, today's narrowing set of valuations has left bonds largely indistinguishable from one another. Little differentiation in pricing across sectors, industries and credit quality has created a market with proportionately less room for error. We believe fundamentals ultimately drive returns and our ability to independently assess credit risk can create meaningful opportunities for alpha when opinions of market direction diverge.

Past performance does not guarantee and is not a reliable indicator of future results. Investment returns and principal values will fluctuate so that an investor's shares, when redeemed, may be worth more or less than their original cost. Current performance may be lower or higher than that shown. Call 800.344.1770 for current to most recent month-end performance. The performance information shown does not reflect the deduction of a 2% redemption fee on shares held by an investor for 90 days or less and, if reflected, the fee would reduce the performance quoted. Unlike the Index, the High Income Fund may hold loans and other security types. At times, this causes material differences in relative performance.

## Portfolio Construction

The team generally determines the amount of assets invested in each issuer based on conviction, valuation and availability of supply. Based on the team's analysis it divides the portfolio into three parts. Core investments are generally positions with stable to improving credit profiles and lower loan to value ratios. Spread investments are those where the team has an out-of-consensus view about a company's credit improvement potential. Opportunistic investments are driven by market dislocations that have created a unique investment opportunity. Allocations to each group will vary over time based on market conditions.

## Team Leadership

Portfolio Manager	Years of Investment Experience

Carefully consider the Fund's investment objective, risks and charges and expenses. This and other important information is contained in the Fund's prospectus and summary prospectus, which can be obtained by calling 800.344.1770. Read carefully before investing.

Current and future portfolio holdings are subject to risk. Fixed income securities carry interest rate risk and credit risk for both the issuer and counterparty and investors may lose principal value. In general, when interest rates rise, fixed income values fall. High income securities (junk bonds) are speculative, experience greater price volatility and have a higher degree of credit and liquidity risk than bonds with a higher credit rating. The portfolio typically invests a significant portion of its assets in lower-rated high income securities (e.g., CCC). Loans carry risks including insolvency of the borrower, lending bank or other intermediary. Loans may be secured, unsecured, or not fully collateralized, trade infrequently, experience delayed settlement, and be subject to resale restrictions. Private placement and restricted securities may not be easily sold due to resale restrictions and are more difficult to value. The use of derivatives in a portfolio may create investment leverage and increase the likelihood of volatility and risk of loss in excess of the amount invested. International investments involve special risks, including currency fluctuation, lower liquidity, different accounting methods and economic and political systems, and higher transaction costs. These risks typically are greater in emerging markets.

ICE BofA US High Yield Master II Index measures the performance of below investment grade \$US-denominated corporate bonds publicly issued in the US market. J.P. Morgan Leveraged Loan Index is designed to mirror the investable universe of the USD-denominated institutional leveraged loan market. The index(es) are unmanaged; include net reinvested dividends; do not reflect fees or expenses; and are not available for direct investment.

For the purpose of determining the Fund's holdings, securities of the same issuer are aggregated to determine the weight in the Fund. The discussion of portfolio holdings does not constitute a recommendation of any individual security. Securities named in the Commentary, but not listed as a Top Ten Holding or not listed here are not held in the Fund as of the date of this report. The portfolio managers' views and portfolio holdings are subject to change and the Fund disclaims any obligation to advise investors of such changes.

All information in this report includes all classes of shares, except performance and expense ratio information and as otherwise indicated, and is as of the date shown in the upper right hand corner unless otherwise indicated. Portfolio statistics calculations exclude outlier data and certain securities which lack applicable attributes, such as private securities. Artisan Partners may substitute information from a related security if unavailable for a particular security. Portfolio statistics include accrued interest unless otherwise stated and may vary from the official books and records of the Fund. Totals may not sum due to rounding.

**30-Day SEC Yield** is based on a formula specified by the SEC that calculates a fund's hypothetical annualized income, as a percentage of its assets. This hypothetical yield will differ from the fund's actual experience and as a result, income distributions from the fund may be higher or lower. **Credit Quality** ratings are from S&P and/or Moody's. Ratings typically range from AAA (highest) to D (lowest) and are subject to change. The ratings apply to underlying holdings of the portfolio and not the portfolio itself. If securities are rated by both agencies, the higher rating was used. Securities not rated by S&P or Moody's are categorized as Unrated/Not Rated. **Maturity Distribution** represents the weighted average of the maturity dates of the securities held in the portfolio. **Spread** is the difference in yield between two bonds of similar maturity but different credit quality. **Par-weighted Default Rate** represents the total dollar volume of defaulted securities compared to the total face amount of securities outstanding that could have defaulted. **Alpha** is a quantitative measure of the volatility of the portfolio relative to a designated index. A positive alpha of 1.0 means the fund has outperformed its designated index by 1%. Correspondingly, a similar negative alpha would indicate an underperformance of 1%. **Collateralized Loan Obligation (CLO)** is a security backed by a pool of debt.
