

Artisan Small Cap Fund

MONTHLY
Commentary

Investor Class: ARTSX | Advisor Class: APDSX As of 31 January 2023

Commentary

The Russell 2000® Index started 2023 in positive territory with a return of 9.8% in January. December consumer price index data showed a decline of 0.1% from November and a more moderate increase of 6.5% from a year earlier, down from November's 7.1% pace. Since CPI peaked at 9.1% in June, falling energy and goods prices have contributed to the more measured pace of price gains. Economic data, such as industrial production, retail sales and housing activity, also continue to show evidence that tightening financial conditions are making their way through the economy. However, labor market concerns are complicating the picture as an unexpected drop in the unemployment rate from 3.6% to 3.5% was reported early in the month.

Our portfolio trailed the Russell 2000® Growth Index in January. Among our top detractors were two health care holdings, Halozyme and Shockwave Medical. Halozyme is a biotechnology firm with a unique technology platform enabling the conversion of intravenous (IV) formulated biologic and small molecule drugs to a subcutaneous (SC) formulation which pharmaceutical companies license to optimize their valuable therapies. Shares fell after Halozyme pushed a royalty milestone from 2023 to 2024 and held to its long-standing tradition of providing conservative guidance. We were surprised by the share weakness and remain optimistic on the company's long-term fundamental setup.

Shockwave is an early-stage medical device company developing and commercializing products to treat calcified cardiovascular disease. From a fundamental standpoint, we have been encouraged by recent developments. The company received FDA approval for its C2 Plus intravascular lithotripsy (IVL) device for coronary procedures much earlier than expected. Its C2 Plus product provides a 50% increase in treatment capacity versus the current C2 device and is currently in limited launch in Europe. Despite the positive catalyst, shares experienced weakness after announcing an acquisition of Neovasc. While the acquisition will add near term expense, we believe the long-term potential is attractive and added to the position.

Among our top contributors were Lattice Semiconductor and Monolithic Power Systems, both of which are semiconductor companies. Lattice Semiconductor is a fabless vendor of field programmable gate array (FPGA) chips which customers can program and configure to their specifications. These chips are used in numerous applications, from data centers and 5G infrastructure to routers, switches, PCs, industrial Internet of things devices, factory automation and automobiles, to name a few. We have been encouraged by Lattice's continued solid results in the face of a slowing economic environment, which testifies to the new management team's progress in reinvigorating both its chip offerings and its software tools for customers.

Monolithic Power Systems designs analog power-management chips for a wide variety of industrial and consumer devices. The company is executing well as its customers convert their analog, digital and power semiconductor chips into its single-chip design, which is energy efficient and priced lower than peers. While we acknowledge certain areas of the business may be a source of weakness in the near term (storage, computing and consumer), we believe much of that is now discounted. However, the enterprise and auto areas of the business are set up to be big growth drivers over the next couple years given the company's differentiation in both segments, which is driving market share gains and pricing power.

Carefully consider the Fund's investment objective, risks and charges and expenses. This and other important information is contained in the Fund's prospectus and summary prospectus, which can be obtained by calling 800.344.1770. Read carefully before investing.

Current and future portfolio holdings are subject to risk. The value of portfolio securities selected by the investment team may rise or fall in response to company, market, economic, political, regulatory or other news, at times greater than the market or benchmark index. A portfolio's environmental, social and governance ("ESG") considerations may limit the investment opportunities available and, as a result, the portfolio may forgo certain investment opportunities and underperform portfolios that do not consider ESG factors. International investments involve special risks, including currency fluctuation, lower liquidity, different accounting methods and economic and political systems, and higher transaction costs. These risks typically are greater in emerging and less developed markets, including frontier markets. Securities of small- and medium-sized companies tend to have a shorter history of operations, be more volatile and less liquid and may have underperformed securities of large companies during some periods. Growth securities may underperform other asset types during a given period.

Russell 2000® Growth Index measures the performance of US small-cap companies with higher price/book ratios and forecasted growth values. Russell 2000® Index measures the performance of roughly 2,000 US small-cap companies. The index(es) are unmanaged; include net reinvested dividends; do not reflect fees or expenses; and are not available for direct investment.

For the purpose of determining the Fund's holdings, securities of the same issuer are aggregated to determine the weight in the Fund. The discussion of portfolio holdings does not constitute a recommendation of any individual security. Securities named in the Commentary, but not listed as a Top Ten Holding or not listed here are not held in the Fund as of the date of this report. The portfolio managers' views and portfolio holdings are subject to change and the Fund disclaims any obligation to advise investors of such changes.

Unless otherwise indicated, all information in this report includes all classes of shares, except performance and expense ratio information, and is as of the date shown in the upper right hand corner. Totals may not sum due to rounding.

Sector exposure percentages reflect sector designations as currently classified by GICS.

Our capital allocation process is designed to build position size according to our conviction. Portfolio holdings develop through three stages: GardenSM, CropSM and HarvestSM. GardenSM investments are situations where we believe we are right, but there is not clear evidence that the profit cycle has taken hold, so positions are small. CropSM investments are holdings where we have gained conviction in the company's profit cycle, so positions are larger. HarvestSM investments are holdings that have exceeded our estimate of intrinsic value or holdings where there is a deceleration in the company's profit cycle. HarvestSM investments are generally being reduced or sold from the portfolios.

Consumer Price Index measures the average change in prices over time that consumers pay for a basket of goods and services.
