

Artisan Global Opportunities Fund

QUARTERLY
Commentary

Investor Class: ARTRX | Advisor Class: APDRX | Institutional Class: APHRX

As of 31 December 2021

Investment Process

We seek to invest in companies that possess franchise characteristics, are benefiting from an accelerating profit cycle and are trading at a discount to our estimate of private market value. Our investment process focuses on two distinct elements—security selection and capital allocation. We overlay our investment process with broad knowledge of the global economy.

Security Selection

We seek to identify companies that have franchise characteristics (e.g., low-cost production capability, possession of a proprietary asset, dominant market share or a defensible brand name), are benefiting from an accelerating profit cycle and are trading at a discount to our estimate of private market value. We also assess key environmental, social and governance (ESG) issues that could impact future stock returns. We look for companies that are well positioned for long-term growth, which is driven by demand for their products and services, at an early enough stage in their profit cycle to benefit from the increased cash flows produced by the emerging profit cycle.

Capital Allocation

Based on our fundamental analysis of a company's profit cycle, we divide the portfolio into three parts. GardenSM investments are small positions in the early part of their profit cycle that may warrant more sizeable allocations as their profit cycle accelerates. CropSM investments are positions that are being increased to a full weight because they are moving through the strongest part of their profit cycles. HarvestSM investments are positions that are being reduced as they near our estimates of full valuation or their profit cycles begin to decelerate.

Broad Knowledge

We overlay the security selection and capital allocation elements of our investment process with a desire to invest opportunistically across the entire global economy. We seek broad knowledge of the global economy in order to find growth wherever it occurs.

Team Overview

We believe deep industry expertise, broad investment knowledge, a highly collaborative decision-making process and individual accountability are a powerful combination. Since the inception of the team, we have been committed to building a team of growth investors that retains these attributes and is solely dedicated to our process and approach.

Past performance does not guarantee and is not a reliable indicator of future results. Investment returns and principal values will fluctuate so that an investor's shares, when redeemed, may be worth more or less than their original cost. Current performance may be lower or higher than that shown. Call 800.344.1770 for current to most recent month-end performance. Performance may reflect agreements to limit a Fund's expenses, which would reduce performance if not in effect.

Investing Environment

The MSCI AC World Index delivered solid 6.7% and 18.5% returns in Q4 and 2021. Investors were rewarded in 2021 with a 28% rise in forward earnings expectations exceeding a 9% compression in multiples. Q3 corporate earnings came in ahead of expectations (42% YOY growth vs. 34% expected) and have generally proved resilient to ongoing supply chain disruptions. Consensus earnings expectations for 2022 and 2023 moved higher throughout the quarter—projecting 7% and 8% growth.

The emergence of the more transmissible, though less severe omicron COVID-19 variant sparked concern the pandemic could be prolonged. New cases hit record highs toward the end of the quarter and continued along an upward trajectory into the new year. The market appears to be anticipating this new strain will not cause the same economic consequences experienced earlier in the pandemic. Instead, investors seem to believe 2022 could see COVID-19 transition into a longer term endemic disease.

The Federal Reserve (Fed)'s more hawkish pivot late in Q4—tightening labor market, supply chain constraints causing persistent inflation—exacerbated the valuation scrutiny on growth stocks as well as more speculative pockets of the market. The monthly treasury and mortgage-backed security asset purchase program is expected to conclude by March (vs. mid-2022 previously). Liftoff in the fed funds rate could come shortly thereafter with the market assigning a 75% rate hike probability to March as of this writing. Some sell-side analysts have recently increased their assumptions for interest rate increases this year—Goldman Sachs indicating four moves (vs. three prior).

Performance Discussion

We were pleased with our 4.7% and 13.6% absolute returns in Q4 and 2021, though both trailed the MSCI AC World Index. In Q4, stock selection among our health care holdings was the primary driver of our relative underperformance (Veeva—profit cycle dynamic discussed later). It's worth noting fourth quarters have often represented challenging periods for us—we have trailed over 150bps on average since inception. While our process remains consistent throughout calendar years, some other market participants seem to behave differently as the calendar draws to a close. We tend to see more profit-taking in stocks that have performed well year-to-date, and stocks that have declined often experience sustained tax-loss selling. As we manage our portfolio with a multi-year time horizon, these late-year stock price moves appear shortsighted. While closing the year on a negative performance note is never ideal, it often leaves us entering the new year more optimistic about the future return potential of the portfolio. This is the case today as we discuss further in the perspectives section.

Short-term market dynamics aside, our bottom contributors in the quarter included Magazine Luiza, Activision Blizzard and Veeva Systems. Magazine Luiza is a Brazilian retailer transforming itself from brick-and-mortar to a leader in e-commerce. In addition to investors

weighing competitive threats, shares have been pressured as the company's near-term rate of growth slows amid difficult comps from 2020—the company benefited meaningfully from the pandemic—and investments in future growth. We are monitoring the competitive dynamic closely. Meanwhile, it is a small GardenSM position.

We wrote about Activision Blizzard's highly publicized internal harassment allegations in our Q3 letter. At the time, we believed the company's ability to retain and attract talent could be impacted longer term because of the reputational damage inflicted by this cultural short coming, and we pared back our exposure. This foresight proved accurate when the company reported its Q3 results. Two of the company's game titles in the Blizzard division (Diablo 4, Overwatch 2)—where the harassment allegations originated—were delayed (with no release timelines). We believe this could be tied to the loss of key talent, an inability to attract new talent and/or the broader organizational distraction it has caused. Furthermore, a recently published Wall Street Journal investigation found the CEO had been aware of misconduct for years. We believe this is a great example of how ESG issues reflect real operational risk—talent is by far a key component of the company's growth. Given this development and the growing list of ESG-related issues at the company—harassment and sexual misconduct allegations, CEO compensation, gaming culture's effect on youth—we decided to end our investment campaign in Q4.

Veeva is a leading provider of cloud-based SaaS solutions for the pharmaceutical and life sciences industries. Shares have come under pressures as investors rotate out of technology growth stocks amid a more hawkish pivot by the US Federal Reserve. Furthermore, the company's recent earnings and forward outlooks have come in at a slimmer margin (vs. Street expectations) than investors have grown accustomed to. This has prompted questions around the sustainability of Veeva's growth profile, particularly as large pharmaceutical companies downsize their sales forces and pivot toward digital marketing approaches—impacting the number of Veeva CRM licenses. We acknowledge a potential near-to-intermediate term air pocket in the company's rate of earnings growth, though we believe the longer term growth runway is attractive. The company's Vault application—a cloud-based platform unifying clinical, regulatory, quality and safety functions in the drug development process—still has significant growth runway. We believe shares are more than accounting for these dynamics, and we added to our position at an attractive discount to our PMV estimate.

Among our top contributors were Advanced Micro Devices, Arista Networks and Lowe's. Advanced Micro Devices (AMD) has executed solidly so far in 2021, particularly given a very difficult supply chain environment—limited availability of leading-edge wafers and packaging substrates and back-end COVID-related factory shutdowns in southeast Asia. In its Q3 results, the company raised full year revenue growth guidance to 65% and gross margins to 48%—both of which were ahead of where the company and Street originally

anticipated they would be at the beginning of the year. We expect the solid profit cycle momentum to continue in 2022-23 as the company benefits from the ramp of third generation EPYC in data centers and the launch of 5nm Ryzen CPUs for client PCs—both of which should drive further share gains over Intel and from wider use of graphic processing units (GPUs) in the data center.

Arista Networks is the market leader for cloud networking equipment used in data centers for public, private and hybrid cloud deployments. The company's top-line growth has recently been bolstered by 400G deployments—the next generation of tech powering data centers—and further enterprise network penetration as customers migrate away from Cisco (~80% market share vs. ~5% for Arista). While the profit cycle is nicely in motion, we pared our exposure as shares began to approach our PMV estimate.

Lowe's is a leading US homebuilding and repair supplier. The company is effectively managing rising input cost pressures and proving more resilient than the Street had been anticipating against difficult YOY growth comparisons. Our turnaround thesis—improve the in-store experience, upgrade technology—is firmly in motion, and we believe the longer term profit cycle ahead is compelling.

Portfolio Activity

We started new investment campaigns in ON Semiconductor and Richemont. ON Semiconductor is a global supplier of advanced semiconductors for sophisticated electronics applications within the automotive, industrial, communications, consumer and computing end-product markets. The company operates across three segments: power solutions, advanced solutions and intelligent sensing. A new management team, which took over toward the end of 2020, is working to turn the company around by rightsizing its manufacturing footprint, exiting more commoditized products and investing in several compelling growth opportunities. When the dust has settled, we expect the portfolio to be more focused on the auto and industrial segments. As auto OEMs incorporate more automated safety technology and car fleets transition from internal combustion engines to battery electric vehicles, ON's image sensors for cars and silicon carbide inverters—which extend EV battery efficiency—will be in high demand. This mix shift should drive ON's margins higher over time. With shares trading at an attractive valuation, we initiated a GardenSM position.

Richemont is a Switzerland-based luxury goods company primarily engaged in producing and selling jewelry and watches. The company's jewelry business is the largest in the globe and consists of two leading brands—Cartier and Van Cleef & Arpels. Both are experiencing strong brand heat due to strategic actions taken by management in recent years—watch inventory buy-backs, a streamlined distribution footprint, a refocused product portfolio with the relaunch of both the iconic and new product lines, fresher communications and a step-up in the digital channel. We expect the momentum within the jewelry business to continue in the periods ahead. Meanwhile, the company's smaller divisions that have

struggled in recent years—online distributors, specialty watches—appear to be troughing, and in some instances, appear to be in the early stages of positively contributing to the company's overall growth profile.

In addition to Activision Blizzard, we also ended our investment campaigns in Starbucks and Iberdrola. Iberdrola is the one of the world's largest developers and operators of renewable power generation with a portfolio of assets primarily across Europe but also in the US, Brazil and Mexico. Our investment thesis was predicated on the belief the company was well positioned to excel amid the acceleration of global renewable power generation installations and continued network upgrades/investments to modernize a grid suitable for de-carbonization—particularly in Europe where we expected carbon-emissions standards to be reduced at an accelerating rate over the next decade. We ended our investment during the quarter amid growing competition in Europe and in favor of other companies with more compelling profit cycles.

Starbucks is the world's leading retailer of specialty coffee. We began our investment campaign in early 2020 as we were attracted to its strong balance sheet and digital capabilities, both of which we anticipated would enable the company to make it through the pandemic and come out on the other side positioned to gain market share. We exited our position in October amid signs the profit cycle momentum was moderating—planned investments in its workforce in 2022, inflationary pressures—and as shares approached our PMV estimate.

Along with our add to Veeva Systems, we also brought Airbnb into the CropSM during Q4. Airbnb's dominant 50% market share positions it to benefit from the secular trend away from conventional lodging options. We also believe the company has several margin tailwinds (closing its gap to peers Booking.com and VRBO), which should boost its already highly cash generative business model, including leverage from scale, a higher proportion of direct traffic (less reliance on Google search, etc.) and increasing its booking margin (service fee charged to hosts and guests).

In addition to Arista Networks, we made several other valuation trims during the quarter, including Dexcom. Dexcom is executing well, adding a record number of new patients as it rolls out continuous glucose-monitoring (CGM) across the globe. We believe the company's growth could accelerate further once it launches its new G7 CGM—60% smaller than G6, fully disposable, interoperable with a variety of insulin delivery technologies—in 2022. We believe the company is well positioned to continue penetrating the Type 1 diabetes market and drive adoption in the much larger Type 2 diabetes market, where data supporting the clinical and economic case for CGM sensors is building. That said, shares have been rewarded for this strong fundamental performance and outlook and neared our PMV estimate.

We also pared our exposure to AstraZeneca. When we began our AstraZeneca investment campaign in late 2017, we were excited about the company coming off several years of refocusing and revitalizing its R&D efforts, divesting non-core areas of its business and a promising pipeline of immuno-oncology drugs. The company has executed nicely over our holding period, launching multiple drugs that have delivered growth ahead of expectations. We expect a more moderate rate of growth going forward, and we pared our position size in favor of more compelling profit cycles in our portfolio.

Our ESG Journey

2021 was a year in which we continued to stretch ourselves to advance our environmental, social and governance (ESG) integration efforts. While our framework is unchanged, we learned and evolved through various knowledge development initiatives—including third-party education sessions focused on climate change, modern slavery and engagement techniques. We believe our newfound knowledge puts us in a better position to ask the right questions in our engagement activities and influence our companies to chart a course that leads them to better outcomes for their stakeholders.

Our engagement activities this year gave us a better appreciation of where our holdings are in their own ESG journeys. We own several companies who we consider best-in-class as it relates to specific ESG components. HubSpot's public DE&I disclosures include varying degrees of gender, ethnicity and age metrics across different levels of the organization and how they have trended historically. Ingersoll Rand is a noted pioneer when it comes to elevating blue-collar employee engagement, including granting equity to everyone in the company.

We have also had opportunities to be a helpful resource to companies who are much earlier in their ESG journeys—a number of which proactively reached out to us to understand how we would like them to progress over time. These conversations have covered several topics including the importance of gender and ethnic diversity at the board and management levels, measuring and setting sustainability targets, ways to think about ESG materiality and our expectations around ESG-related disclosures.

We look forward to communicating our 2021 efforts in more detail in our sustainability report set for publication by the end of Q1. We feel good about the accomplishments we have made over the past year, and we believe our efforts have elevated our approach.

Perspective

Equity markets had a volatile end to 2021 as investors weighed the impact of multiple macro developments—the omicron COVID-19 variant, the Fed announcing a faster than expected pace of tapering, continued supply chain and labor constraints—on corporate profitability and equity discount rates. We were not surprised to see our portfolio's underperformance on a relative basis as many of our large secular growth holdings saw strong stock price gains in the middle of the year and had reached more demanding valuations. In

many instances, we pared back our exposures where prices met or exceeded our estimates of intrinsic value.

Fourth quarters have always been times for us to look forward, assessing which franchises are best positioned for strong profit growth in the following year and years to come. This has involved our most extensive team travel to visit current and potential holdings, and we have done our best to replicate this virtually in 2020-2021 (though we were able to squeeze in a few research trips early in Q4 before omicron's emergence). In that sense, this quarter reminded us of some past year-ends—a period in which our confidence in the portfolio's long-term profit cycles strengthens, while short-term stock prices move against us. As such, we did our best to take advantage of the volatility and upgrade the portfolio by adding to high-conviction holdings at opportunistic valuations while seeding four new promising GardenSM investments. So, as in past periods of challenging Q4 performance, we enter the new year optimistic about the long-term return potential of the portfolio given the quality of our franchises, the durability of their profit cycles and more attractive valuations.

That's not to say we're confident that market enthusiasm will return to high-quality growth equities in the short term. To state the obvious, the macro environment remains highly uncertain and volatile. We would describe the current consensus views as: 1) the omicron variant's high transmissibility and seemingly less severe outcomes will likely make it the final big wave of the pandemic before it settles into a long-term endemic disease; and 2) interest rates will likely normalize higher coming out of the pandemic. Both of these seem reasonable to us, in which case value stocks and cyclical businesses may remain in favor for a period of time as economic activity accelerates, and as rising interest rates cause investors to question higher multiple growth stocks. We have several growth cyclicals we believe can perform well in this type of market environment—Schwab, RicheMont, London Stock Exchange, FIS, Banco Bilbao, Volkswagen, Ingersoll Rand, CNH Industrial, ON Semiconductor.

It's worth noting, of course, that both COVID-19 and interest rate movements have frequently failed to conform with investor expectations in the past. But even in the above "base case" scenario, we continue to have confidence in the portfolio's longer term prospects. We have written many times before about the massive and long-duration shifts (cloud computing, software-enabled automation, biomedical discovery, e-commerce, clean energy) supporting the profit cycle outlooks for many of our investments. During periods of growth stock outperformance, high valuations can emerge as a reasonable concern offsetting these strong fundamental outlooks. But market rotations away from growth can make this a "self-correcting problem," leaving us with a more attractively valued portfolio (which we believe we have been able to upgrade during the rotation) that has performed well over full market cycles. We perhaps don't say this frequently enough—it is our clients' trust and patience that have allowed us to maintain this long-term perspective during periods of underperformance.

Portfolio positioning and outlook aside, we would like to take the time to recognize two important year-end promotions on our team, Jay Warner and Cindy Mu, to portfolio manager and associate portfolio manager, respectively. These promotions reflect the dedication and leadership they have brought to the team, along with the value each has added for clients. While we consider our investment process robust (even more so after spending the past three years integrating ESG considerations into it), we think our long-term investment returns and client relationships have been primarily supported by the quality of our team and culture. As an autonomous investment organization within Artisan, we've always viewed the development of our team and of the individual investors who comprise it as one of our most important responsibilities. To date, we have been proud of the results—steadily growing our research organization since our founding, accumulating experience, tenure and trust, and providing numerous opportunities for successful individuals to advance their careers.

Carefully consider the Fund's investment objective, risks and charges and expenses. This and other important information is contained in the Fund's prospectus and summary prospectus, which can be obtained by calling 800.344.1770. Read carefully before investing.

Current and future portfolio holdings are subject to risk. International investments involve special risks, including currency fluctuation, lower liquidity, different accounting methods and economic and political systems, and higher transaction costs. These risks typically are greater in emerging markets. Securities of small- and medium-sized companies tend to have a shorter history of operations, be more volatile and less liquid and may have underperformed securities of large companies during some periods. Growth securities may underperform other asset types during a given period.

MSCI All Country World Index measures the performance of developed and emerging markets. The index(es) are unmanaged; include net reinvested dividends; do not reflect fees or expenses; and are not available for direct investment.

This summary represents the views of the portfolio managers as of 31 Dec 2021. Those views may change, and the Fund disclaims any obligation to advise investors of such changes. For the purpose of determining the Fund's holdings, securities of the same issuer are aggregated to determine the weight in the Fund. The holdings mentioned above comprise the following percentages of the Artisan Global Opportunities Fund's total net assets as of 31 Dec 2021: Advanced Micro Devices Inc 5.8%, Veeva Systems Inc 3.6%, Lowe's Cos Inc 2.6%, Ingersoll Rand Inc 2.2%, The Charles Schwab Corp 2.1%, CNH Industrial NV 1.8%, Fidelity National Information Services Inc 1.7%, AstraZeneca PLC 1.7%, Banco Bilbao Vizcaya Argentaria SA 1.6%, HubSpot Inc 1.6%, Airbnb Inc 1.6%, Arista Networks Inc 1.5%, Cie Financiere Richemont SA 1.3%, Volkswagen AG 1.3%, London Stock Exchange Group PLC 1.3%, ON Semiconductor Corp 0.8%, Magazine Luiza SA 0.5%. Securities named in the Commentary, but not listed here are not held in the Fund as of the date of this report. Portfolio holdings are subject to change without notice and are not intended as recommendations of individual securities. All information in this report, unless otherwise indicated, includes all classes of shares (except performance and expense ratio information) and is as of the date shown in the upper right hand corner. This material does not constitute investment advice.

Attribution is used to evaluate the investment management decisions which affected the portfolio's performance when compared to a benchmark index. Attribution is not exact, but should be considered an approximation of the relative contribution of each of the factors considered.

Portfolio statistics are obtained from various data sources and intended to provide a general view of the portfolio, or Index, at a point in time. Artisan Partners excludes outliers when calculating portfolio characteristics and may use data from a related security to calculate statistics if information is unavailable for a particular security. **Private Market Value** is an estimate of the value of a company if divisions were each independent and established their own market stock prices. **Forward Earnings** are an estimate of the next period's earnings of a company, usually till the completion of the current fiscal year and sometimes to the following fiscal year.

Our capital allocation process is designed to build position size according to our conviction. Portfolio holdings develop through three stages: GardenSM, CropSM and HarvestSM. GardenSM investments are situations where we believe we are right, but there is not clear evidence that the profit cycle has taken hold, so positions are small. CropSM investments are holdings where we have gained conviction in the company's profit cycle, so positions are larger. HarvestSM investments are holdings that have exceeded our estimate of intrinsic value or holdings where there is a deceleration in the company's profit cycle. HarvestSM investments are generally being reduced or sold from the portfolios.

Artisan Partners Funds offered through Artisan Partners Distributors LLC (APDLLC), member FINRA. APDLLC is a wholly owned broker/dealer subsidiary of Artisan Partners Holdings LP. Artisan Partners Limited Partnership, an investment advisory firm and adviser to Artisan Partners Funds, is wholly owned by Artisan Partners Holdings LP.
